

COMELETRIC

Specialized rotary and control switches

CONTROL SWITCHES STANDARD ELECTRIC DIAGRAMS

Models Available Index

Available for:

Series: FR10	Models: Stayput positions: C101 - C103 - C104 - C130 - C138 - C141 - C152 - C154 - C154P C161 - C168 - C172 - C182 - C182P - C189 - C190 - C192 - C192L Spring return positions: C105 - C109 - C115 - C129 - C143 - C148 - C149 - C157 - C157P C167 - C187 - C192LM - C196 Maintained Action Contact: C118 - C139
------------------------	--

Series: R20	Models: Stayput positions: R106 - R102 - R103 - R108 - R108B - R131 - R141 - R162 R176 - R193 - R193L Spring return positions: R121 - R109 - R123 - R125 - R132 - R160 - R193LM Maintained Action Contact: R120
-----------------------	---

Series: R16	Models: Stayput positions: R601 - R602 - R603 - R605 Spring return positions: R601M - R602M - R603M - R605M Maintained Action Contact: R608
-----------------------	--

Series: FRMC 6	Models: Stayput positions: C601 - C602 - C602K - C603 - C609 - C610 - C616 - C617 - C618 Spring return positions: C607 - C608 - C61 Maintained Action Contact: N.A.
--------------------------	--

Series: FRMC 6 IP20	Models: Stayput positions: C701 - C701E - C702 - C702K - C704 - C708 - C709 Spring return positions: C701M - C702M Maintained Action Contact: N.A.
-------------------------------	---

Series: FRMC 2000	Models: Stayput positions: C201 - C202 Spring return positions: C203 - C204 Maintained Action Contact: N.A.
-----------------------------	--

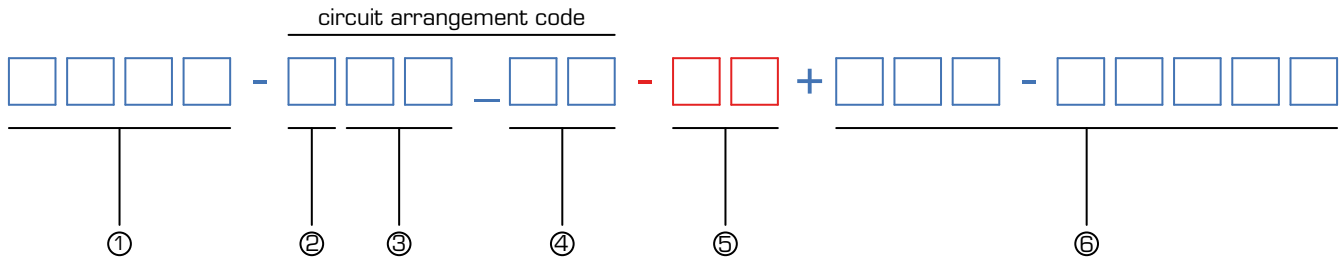

The maximum number of packets varies depending on the series and model.
The maximum number of the packets is stated in the catalogue and in the dimensional drawing of the various models.

Ordering Method

In this catalogue you may find some electric diagrams and instructions for composing independently order codes of standard switches. For special diagrams or diagrams which are not present in this catalogue use the form on page 24. Schemes of this catalogue and their use in the codes are applicable only to the series of switches shown on the previous page. They **are not applicable to the series FR10 62 - FR10 68 - FR10 adf - FRB10 - FRMC 6 80 - FRM10 - DR20 - LR20 - FRMM 6 FRMM 2000.**

These diagrams and the composition of these codes are available in their respective catalogues.

Product Coding

① Model Number of the switch.

Model number means the assembly and construction form unique for each switch, this reference identifies the series, the type of switch, if it has fixed positions or the spring return, the type of knob, if it is provided with control key, key lock or padlock facility. This model number is indicated in the catalogues along with its dimensional drawing and panel cutout. For switches with spring return, the model number is also indicated in the catalogues. It is considered switch with spring return the type where there is a single fixed position. Where there are two or more fixed positions, it is considered as the model number of the switch with all fixed positions. In the previous page there is a list, for the various series of model numbers of the most common types.

② n° of Positions.

This is the reference of the number of positions that the switch should have, from a minimum of 2 up to a maximum of 8, for the series of switches shown in this catalogue. The movements of the knob can be of 45 ° or 90 °.

③ n° of Packets.

As number of packets, it is means by how many isolating discs should be made the switch.

The number of packets affects the number of poles required. Generally in each packet you have a contact NORMALLY OPEN and a contact NORMALLY CLOSED, but this can vary depending on the wiring diagram. In this catalogue electric diagrams with 12 packets of contacts are shown, but this is only an indication, each kind of switch can be realized by a minimum of 1 packets to the maximum foreseen by its model number. In each reference catalogue, next to the table of lengths, it is shown the maximum number of packets suitable for that specific model number.

one Packet

④ n° of Electric diagram

This number, along with the number of positions, is an indication of the electric diagram of the switch required.

It includes the wiring diagram and the movement of the knob, in reference to the diagrams shown below. It has no specific meaning, it is just a sequence number that is used to represent a specific scheme of the switch assembly.

⑤ n° of Locking Program

This number is only used in key operated switches, key lock switches, padlockable switches or with removable knob. It represents the position in which the switch can be locked.

The locking of the switch key operated or with key lock device is made by means of extraction of the key from the same. In the models with removable knob, locking position is the same as for those with the key, instead for the padlockable types it is the position where it is given the opportunity to pull the pin to enter the lock. The reference table for the program number lock is on page 23 of this catalogue and must conform to the movement of the handle provided in the frame of reference of the switch.

⑥ n° Escutcheon Plate

This code is referred to the shape, type and engraving of the Frontplate.

On page 21 of this catalogue, all instructions to create codes of the frontplates used frequently.

Instruments Switches

The Circuit arrangement number has to be mentioned in the product code (point 2-3-4).

VOLTMETER SWITCH : 2 wire Single phase or d.c.		VOLTMETER SWITCH: 4 wire Two Phase or Two separate D-C circuits	
Circuit Arrangement n° 202V		Circuit Arrangement n° 302V	

VOLTMETER SWITCH : 3 Phase voltages measurements.		VOLTMETER SWITCH: 1 Phase to Phase and 3 Phase voltages measurements.	
Circuit Arrangement n° 4A02		Circuit Arrangement n° 4B03	

VOLTMETER SWITCH : 3 Phase to Phase voltages measurements.		VOLTMETER SWITCH : 1 Phase voltage and 3 Phase to Phase voltages measurements.	
Circuit Arrangement n° 4E03		Circuit Arrangement n° 4F04	

VOLTMETER SWITCH : 3 Phase to Phase voltages measurements and 3 Phase voltages measurements.		VOLTMETER SWITCH : 3 Phase to Phase voltages measurements in Two 3 Phase circuits.	
Circuit Arrangement n° 8C08			

AMMETER SWITCH : For 1 Phase current measurement with "0" position.

Circuit Arrangement n° **2G02**

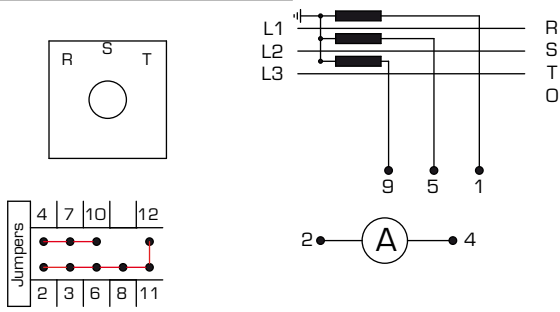

AMMETER SWITCH : 3 positions , 3 Current measurements with 2 transformers without "0" position.

Circuit Arrangement n° **302-A01**

AMMETER SWITCH : 3 positions , 3 Current measurements with 3 transformers without "0" position.

Circuit Arrangement n° **303_A01**

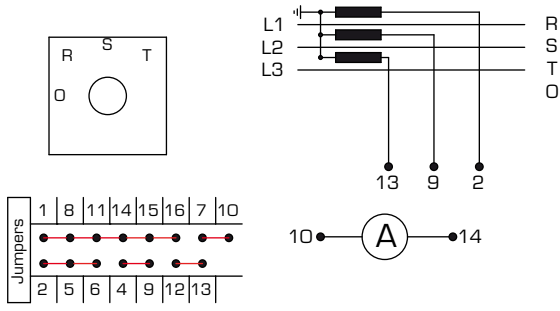

AMMETER SWITCH : 4 positions , 3 Current measurements with 2 transformers.

Circuit Arrangement n° **4D03**

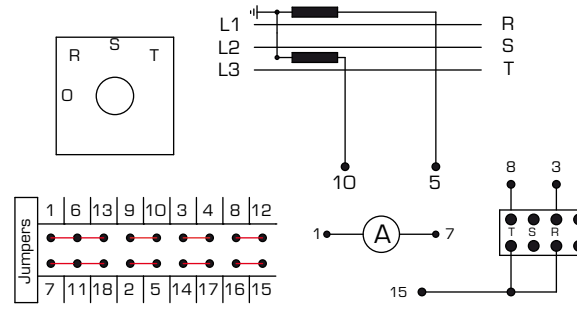

AMMETER SWITCH : 4 positions , 3 Current measurements with 3 transformers.

Circuit Arrangement n° **4H04**

AMMETER SWITCH : 4 positions , 3 Current measurement , 2 current transformers with transducer.

Circuit Arrangement n° **405_A01**

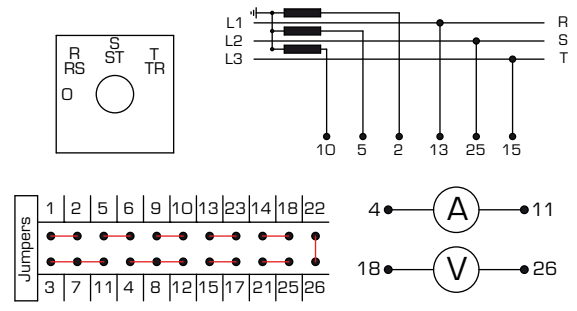

AMMETER SWITCH : 4 positions , 3 Current measurements ,3 current transformers with transducer.

Circuit Arrangement n° **405_A02**

AMMETER - VOLTMETER SWITCH : 4 positions , 3 Phase to Phase and 3 current transformers measurements.

Circuit Arrangement n° **407_AV01**

Circuit Breaker Control Switches

The Circuit arrangement number has to be mentioned in the product code (point 2-3-4).

The Diagram can be used only on switches with spring return or with maintained action contacts, mentioned on page of "MODELS AVAIIABLE INDEX".

The Circuit Breaker Control Switches are Spring return switches "TRIP>O<CLOSE". They are used widely to operate the high and medium voltage circuit breakers. Often additional contacts are needed for use as alarms or indicators, which maintain the configuration of the last order given (TYPICALLY CALLED "MAINTAINED ACTION CONTACTS").

For this application the flag mechanical indicator on the frontal escutcheon plate often is used.

The Flag mechanical indicator shows the last operation, **RED** For CLOSE and **GREEN** For TRIP, when the switch is in LOCK position the color is **BLACK**.

The Type FRMC 6 - FRMC 6 IP20 and th FRMC 2000 are available only with spring return, but without maintained action contacts and flag mechanical indicator.

They are Mainly used for opening and closing of circuit breakers or disconnectors in little mimic panels, in LCC and in mosaic tile system panels.

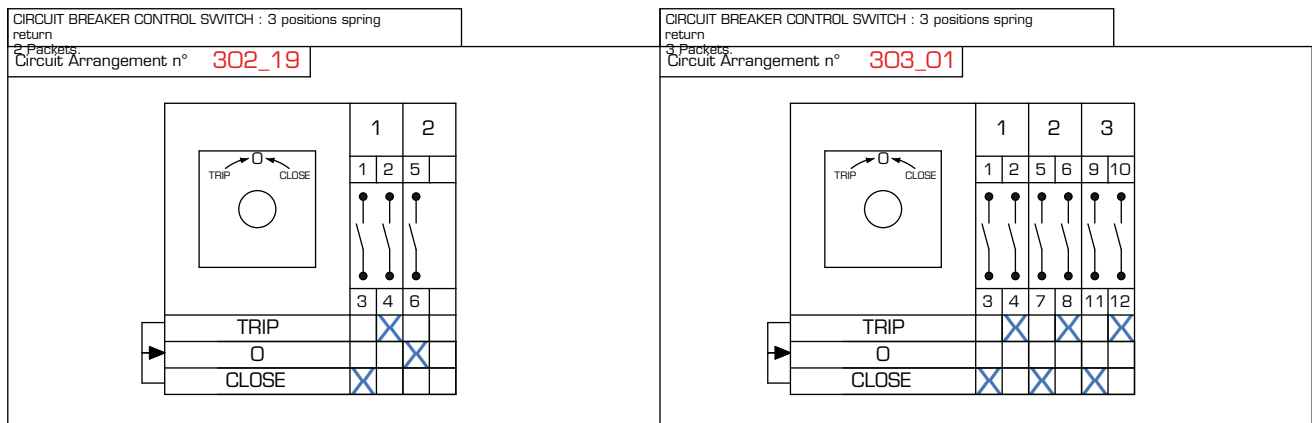

TYPE OF MOUNTING:

Generally Circuit Breaker Control Switches are panel mounting.

For Panel drilling see model Drawing.

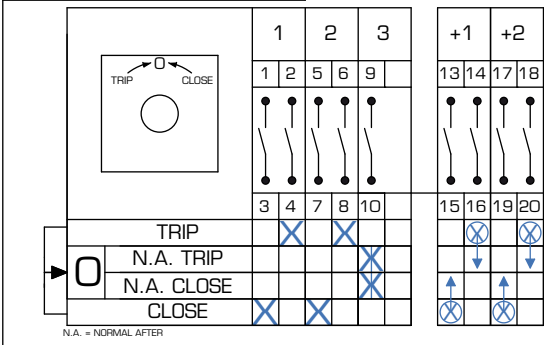

SWITCHING ANGLE:

For spring return switches the switching angle is 45 degrees.

CIRCUIT BREAKER CONTROL SWITCH : 3 positions spring return . with maintained action contacts.

Circuit Arrangement n° 303+2_02

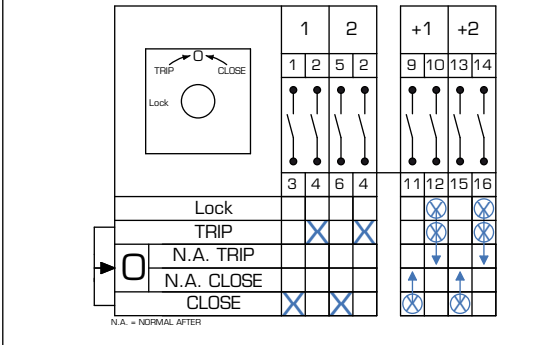

CIRCUIT BREAKER CONTROL SWITCH : 3 positions spring return . with maintained action contacts.

Circuit Arrangement n° 304+2_02

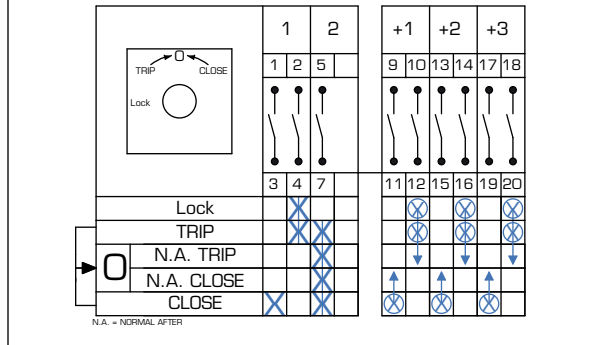

CIRCUIT BREAKER CONTROL SWITCH: 3 positions spring return and 1 stayput position for lock, with maintained action contacts.

Circuit Arrangement n° 402+2_01

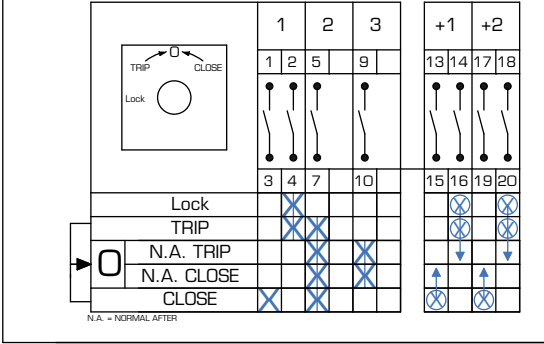

CIRCUIT BREAKER CONTROL SWITCH: 3 positions spring return and 1 stayput position for lock, with maintained action contacts.

Circuit Arrangement n° 402+3_03

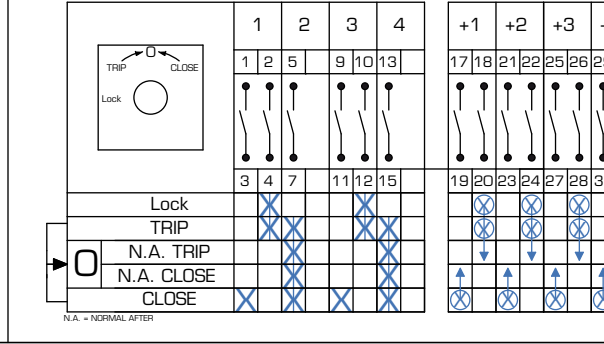

CIRCUIT BREAKER CONTROL SWITCH: 3 positions spring return and 1 stayput position for lock, with maintained action contacts.

Circuit Arrangement n° 403+2_04

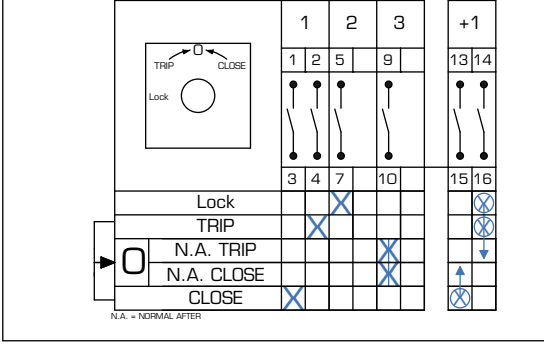

CIRCUIT BREAKER CONTROL SWITCH: 3 positions spring return and 1 stayput position for lock, with maintained action contacts.

Circuit Arrangement n° 404+4_03

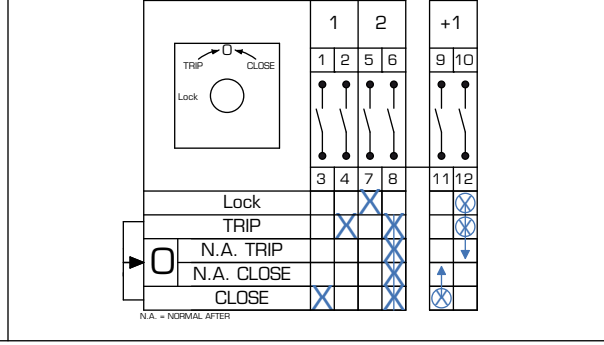

CIRCUIT BREAKER CONTROL SWITCH: 3 positions spring return and 1 stayput position for lock, with maintained action contacts.

Circuit Arrangement n° 403+1_05

CIRCUIT BREAKER CONTROL SWITCH: 3 positions spring return and 1 stayput position for lock, with maintained action contacts.

Circuit Arrangement n° 402+1_06

Other Standard Diagrams.

The Circuit arrangement number has to be mentioned in the product code (point 2-3-4).

STOP - START CONTROL SWITCH : 3 positions spring return .
Per Contactor Control.

Circuit Arrangement n° **3M02**

STOP - START CONTROL SWITCH : 3 positions spring return from START to ON position.

Circuit Arrangement n° **S303_55**

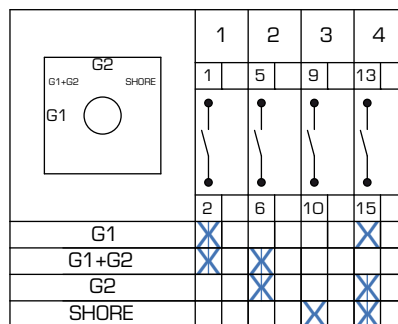

STOP START CONTROL SWITCH : 5 positions 3 Stayput and 2 spring return for inverter control.

Circuit Arrangement n° **5N02**

GENERATOR SHORE SELECTOR SWITCH : 4 positions Stayput.

Circuit Arrangement n° **S404_07**

GANG SWITCH : 3 Positions Stayput 1 pole 0 - A - A+B.

Circuit Arrangement n° **S302_74**

GANG SWITCH : 4 positions stayput 1 pole 0 - A - B - A+B

Circuit Arrangement n° **S302_75**

STAR - DELTA SWITCH : 3 positions stayput.

Circuit Arrangement n° **S306_46**

HEATER CONTROL SWITCH : OFF - HIGH - MEDIUM - LOW.

Circuit Arrangement n° **S303_59**

Standard Escutcheon Plate Ordering

The Escutcheon plate is strictly necessary for fitting the switch to the panel, if none engraving is specified, the frontplate will be supplied Blank, code 00000. The engraving listed below, are only a little part of those available, require the code of the needed one if not present.

① n° type of the Escutcheon Plate.
 Every switch has its own escutcheon plate. It can be easily found in its drawing or reference catalogue.
 RED code couldn't be present, only for special types.

② n° of Positions.
 First Number of code refers to number of the positions of the switch.

③ 2 Positions

Handle and Escutcheon plate Color

In not any specification is required, the switch is supplied with STANDARD LOOK (black Holder; black handle, black escutcheon plate, white text).

Different colours can be supplied following the table below.

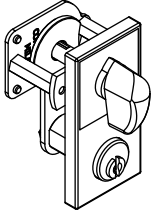

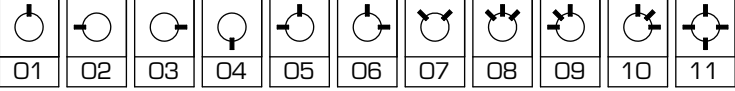

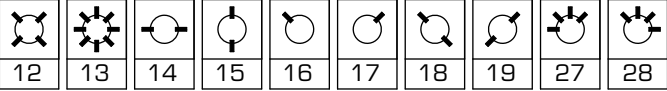

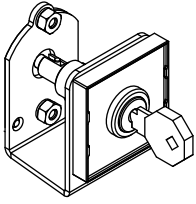

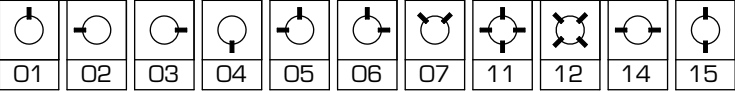

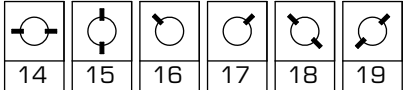

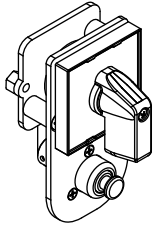

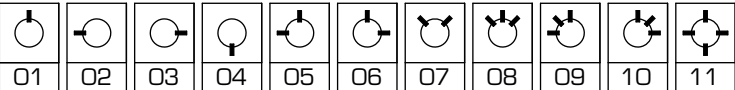

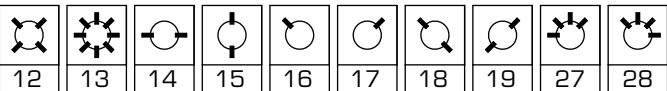

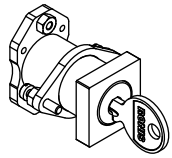

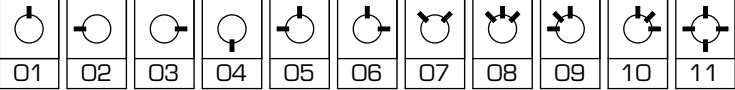

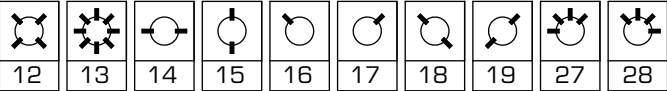

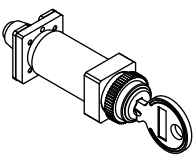

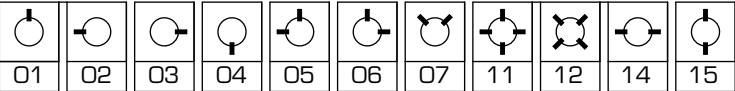

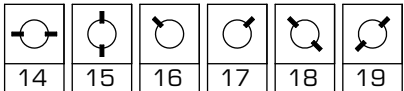

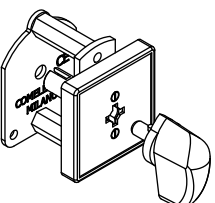

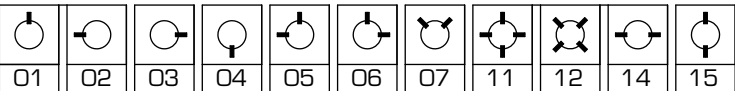

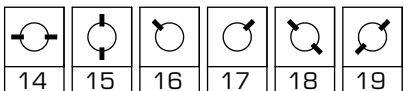

The font used for the text is SWISS 921 BT.

Dimension of letters are proportioned to size of Escutcheon plate.

LOOK N°	Handle	Escutcheon plate	Holder	Text
L1	RED	YELLOW	BLACK	BLACK
L2	RED	BLACK	BLACK	WHITE
L3	BLACK	YELLOW	BLACK	BLACK
L4	RED	RED	RED	WHITE
L5	WHITE	BLACK	BLACK	WHITE
L6	RED	ELECTRO GREY	BLACK	BLACK
L7	BLACK	ELECTRO GREY	BLACK	BLACK
L8	BLACK	GREEN	BLACK	WHITE
L9	BLACK	WHITE	BLACK	BLACK
L10	RED	WHITE	BLACK	BLACK
